	and 2 females absent on Trial	198	259	457
ш				

The receipts and payments during the year are as follows:—

MAINTENANCE ACCOUNT.

The result of the year, at 8s. 9d. per head, has been to produce a sum of £917: 1s. 6d. in excess of the expenditure. The Committee therefore feel themselves warranted in recommending that the rate of payment per week for county patients be reduced to 8s. 2d. from the expiration of last quarter—the 21st of December. The balance in the Treasurer's hands on the 31st of December on this account was £1,588: 8s. 2d.

PRINCIPAL AND INTEREST ACCOUNT.

The rates levied have been as usual £3,555: 3s. 3d.; £3,000 of the principal has been paid off, and £1,357: 15s. 6d. has been paid for interest on the debt; the amount remaining due is £26,500. There is £284: 11s. 8d. in the Treasurer's hands. There is payable for interest previous to the April Sessions (until which time no further rate is payable) £303: 15s.

SPECIAL RATE AND REPAIRS ACCOUNT.

The expenditure on this account has been £421: 16s. 8d., leaving £8: 3s. 9d. in the Treasurer's hands.

FIRST COST ACCOUNT.

The receipts during the year have been £306: 2s. 5d., rom patients not chargeable to the county; which, adled to the balance of £89: 10s. 1d., makes a total of £405: 12s. 6d. £28 only has been expended during he year; the balance in the hands of the Treasurer is herefore £377: 12s. 6d.

CHAPLAIN'S REPORT.

The stated services of the Chaplain have been duly endered, with few unavoidable omissions occasioned by weather and indisposition.

CONDITION AND MANAGEMENT OF THE HOUSE.

It will have been observed that the number of patients in the Asylum is greater than has been before reported. The excess of females over males has however exerienced some diminution. The ratio was a few years go, speaking roundly, about 3 to 2, and may now be bout 5 to 4. On the side of the house appropriated to hale inmates, the wards are quite full; and unless there hould be some pause in the influx of male patients, it is apprehended that it may be necessary at no distant tate, to consider the expediency of providing further accommodation on that side of the Asylum.

The Committee of Visitors have to repeat their satis-

faction with the management of the Asylum under the Medical Superintendent and the other officers; and to express their entire concurrence in the opinion of the Commissioners in Lunacy on the occasion of their last visit, that "the establishment is evidently in a most efficient state."

The Reports of the Medical Superintendent and of the Chaplain, as well as the Statistical Tables, and the Financial Accounts prepared by the Clerk of the Asylum will be appended as usual to this Report of the Visiting Justices.

Signed,

M. WILKINSON, Chairman.

NINETEENTH

ANNUAL REPORT

OF THE

MEDICAL SUPERINTENDENT.

The Medical Superintendent herewith presents his Nineteenth Report, being that for the year 1869, as follows:—

Nineteenth Annual Report.

During the year there have been admitted 108 Numbers and cases; of which 29 were re-admissions, and 79 these of new patients. An unusual feature is that, nstead of the number of men being decidedly less than that of women, the two sexes are exactly equal. The total number under treatment has peen 551; of which number 242 were men, and 309 women. The increase in the numbers, as compared with 1868, has been 23; though, as there s a falling off on the female side of three, the inrease of those treated in the male department mounts to 26. These numbers, however, do not epresent the increase in the average population of the Asylum, which was 9.4 more than in 1868, this excess being entirely in the men's wards. The everage number in the women's wards was within a inite fraction identical with that of the preceding lear.

Admissions.

Average Numbers.

AVERAGE NUMBERS.

YEAR.	MALES.	FEMALES.	TOTAL.
1868	176.4	258.6	435.0
1869	185.6	258.8	444.4

! he number under care at the commencement of

the year was 443. There are now on the books 457, of whom four are absent on trial. There are ten more men in the house than a year ago; the increase in their number being due not simply to the increased influx, but, at least in an equal degree, to the continued diminished rate of mortality for that sex, which was noticed in the last report. The male wards were then reported as nearly full; at the present time some degree of crowding exists; and it is obvious that unless there be a diminution in the numbers, the question of some enlargement of the male wards must before long be entertained. In consequence of the crowded state of the male department, in November last a circular note was addressed to the Clerks of the several Boards of Guardians, informing them that it was needful to restrict the admissions of men to the more urgent cases, and thus offering a prospect of recovery.

Male Division full.

Discharges and Recoveries. The recoveries have amounted nearly to the average number, 47 cases being reported, and one having been discharged relieved. This is a larger proportion than might have been anticipated, considering the state of health and unfavourable character of the disorder in a large number of the cases admitted.

" Criminal Lunatics." There is at present no patient under order of the Secretary of State in the Asylum. The man admitted in 1863, whose case is referred to in the reports for the two past years, died in March last of pulmonary consumption, aged 32.

General Health. The general health has, on the whole, been good, and no epidemic disorder can be said to have affected the household. There is the greater cause

for satisfaction and thankfulness in this behalf, as, during the past six months, small-pox, though in a mitigated form, has prevailed extensively in the neighbouring town of Devizes; where there have been at least 200 cases, though hitherto not one of a fatal character. One of the attendants suffered slightly from the varioloid epidemic, but was at once removed to his own home, and the disorder was happily not further propagated.

The number of deaths, as during the preceding year, was decidedly below the average. Forty-six, the same number as in 1868, are now reported, and of these the number for each sex was exactly equal. The mean mortality has once more been below the average, and less even than in 1868, being at the rate of 10.35 per cent.

Deaths and rate of Mortality.

MEAN ANNUAL MORTALITY. MALES. FEMALES. BOTH SEXES.

For the year 1869 12.4 8.9 10.3

For 18.35 years—1851-1869* 14.8 9.4 11.6

Many of the deaths were those of persons advanced in life, and eleven, or nearly one-fourth of the whole, were 70 years of age and upwards. Of these, five were of more than 80 years.

The table of causes of death (Table 18) presents nothing unusual. A large proportion were from paralysis and other cerebral or spinal diseases, and a considerable number from pulmonary consumption and other forms of disease of the respiratory organs.

Causes of Death.

Inquests were held in two cases. The first was

Inquests.

^{*} Viz., from the opening of the Asylum, Sept. 19th, 1851, to the end of the year 1869.

that of a discharged soldier of intemperate habits, aged 32, who died after a month's residence from maniacal exhaustion. Four days before his death an abscess was detected over the upper part of the chest; and other purulent deposits formed over the right elbow and wrist. On post morten examination, a transverse fracture of the second bone of the sternum appeared, which, though without displacement, had doubtless caused the abscess. The fifth and sixth ribs of the right side were both fractured —the latter a "green-stick" fracture. None of the fractures had a recent appearance, and there were no external bruises. At the inquest a more careful inquiry than usual was made; and the Master and an inmate of the Union House where the patient had been detained before admission, as well as the Sergeant of Police under whose notice he had previously been, were examined, in addition to the officials of the Asylum. There was nothing to shew that he had ever fallen on his chest, or sustained any such injury as could explain the fractures. Before admission, however, he had been very disorderly and excited, and was repeatedly observed to slam his chest with the open hand. It is scarcely credible that the fractures were thus produced, but just possible. The jury returned a verdict of "Accidental Death, but there is no evidence to prove how the injuries which accelerated death were caused." The circumstances were fully inquired into by the Commissioners in Lunacy, as well as by the Visiting Justices, which last came to the conclusion that "though the case was surrounded by obscurity, it was clear that no blame attached to any person connected with the Asylum." The other inquest was in the case of a young man, aged 19. It was one of those painful cases, not altogether to be

guarded against, in which an epileptic patient becomes suffocated, whilst in bed, from turning his face on the pillow during a paroxysm. The verdict, in accordance with the evidence, was "Found dead from an epileptic fit causing suffocation."

The escapes have again been very infrequent, and two only were reported during the year. One of these men was brought back in about two hours from the neighbourhood of Market Lavington; the other from Potterne in about an hour. Neither had sustained any injury, or was any the worse for the escapade.

Escapes.

A new boiler for the Warming Apparatus of the Male side of the house has been provided, similar to that in the Female Department, noticed in last year's report. The substitution of these larger boilers has led to a diminution in the labour, as well as in the consumption of coal, by at least fifty per cent. One of the three boilers of the steam engine in use since the opening of the Asylum has likewise been replaced by one of nearly double the size; an alteration which has resulted in the more efficient supply of steam to both the Kitchen and Laundry.

Improve-

No particular change has occurred in the staff of either Officers, Attendants, or Servants during the year. To the Officers the Superintendent must express his thanks for much important assistance. Their duties, with those of the Attendants and Servants, have, with little exception as regards the latter, been satisfactorily discharged. In consequence of the considerable increase of male patients,

Officers.

Attendants and Servants. an additional attendant in that department has been appointed.

Weekly Charge. At the close of last year, a reduction in the weekly charge, at the rate of 7d. per week, was agreed upon; and the Committee of Visitors have now again felt themselves justified in reducing the charge, in the same proportion. The weekly charge now stands at 8s. 2d. per week.

Supplementary Report on Insanity in Wiltshire. The probable necessity for a further enlargement of the male wards at no remote period, suggests inquiry as to the prevalence of Insanity in this county, as compared with the rest of England. This, and other closely-allied questions, the Medical Superintendent has treated of in a Supplementary Report, which is appended hereto.

Conclusion.

In conclusion, the Medical Superintendent begs to express his sense of obligation to the Committee of Visitors of the Asylum, for the continuance of their kind aid and support in the discharge of his duties.

(Signed,)

JOHN THURNAM, M.D.,

Medical Superintendent.

SUPPLEMENTARY REPORT

ON

INSANITY IN WILTSHIRE.

THE successive additions to the buildings of the Asylum at Devizes, which have from time to time been found requisite to carry out the care and treatment of the insane poor of the county of Wilts, suggest various important inquiries, in regard to the actual and relative number of insane persons in Wiltshire, as compared with other parts of England. On reference to the published "Returns of Pauper Lunatics," collected by the Commissioners in Lunacy;* and on comparing these with the Returns of Population for 1861, it will be found that Wiltshire stands in the unenviable position of having a greater proportion of insane paupers than any Ratio of Pauother county of England and Wales. In the table per Lunatics appended hereto, I have abstracted the numbers for each County, arranged according to the proportion of pauper insanity existing in each.

in England and Wales.

^{*} Twenty-first Report, for 1867. p. 244.

Ratio in adjoining Agricultural Counties

From this table we find that the ratio of pauper lunatics and idiots to the population of England and Wales in 1867, was in round numbers one to five hundred (1 to 494); whilst in Wiltshire it was as high as 1 to 327. The table further shows that several of the counties adjoining to Wiltshire are Wiltshire and only slightly more favourably circumstanced; Gloucester (1 to 341), Oxford (1 to 349), Berks (1 to 340), and Dorset (1 to 387), all being among the eight counties in which the ratio exceeds one to four hundred. The other three referred to are Buckingham, Leicester, and Hereford; the last named being that in which the ratio is nearly as high as in Wiltshire (1 to 329). All the eight counties, it will be seen, are chiefly agricultural; none having any considerable mining, manufacturing or seafaring population."

Ratio in Northern Manufacturing Counties.

If with these eight counties we compare those eight in which the ratio of pauper insanity is the lowest, namely Durham (1 to 843), Glamorgan (1 to 758), Stafford (1 to 729), Yorkshire (W.R. 1 to 709, E.R. 1 to 593, N.R. 1 to 539), Cornwall (1 to 694), Derby (1 to 628), Chester (1 to 595), and Lancaster (1 to 571), we see at once the great difference in the amount of insanity in these populations, which comprise all that is most influential in the mining, manufacturing, and trading enterprize of the kingdom.

Race.

It might, perhaps, be thought that this difference in the ratio of insanity is in part due to a difference of race; and perhaps the South Western and West Midland English counties (Wiltshire included), in which the ratio of insanity is the highest, are to a great extent those in which the native or Celtic element is in many places in excess of the Saxon. Again, in the counties north of the Trent, in which

the ratio of insanity is the lowest, not only were the Anglo-Saxon conquests and settlements very extended, but there was also a later very important inroad of Norsemen and Danes, to whom many of the best characteristics of the people of that part of England are doubtless to be traced. This, however, is a view the extent and validity of which may, perhaps, be regarded as uncertain.

Diminishing Population of Wiltshire.

There can, in any case, be little doubt that the efficient cause of the large relative amount of insanity in Wiltshire and some of the adjoining counties, is to be found in the emigration of many of the more able-bodied and energetic of the labouring population; who from time to time leave their homes for Glamorganshire and other counties of England and Wales; or who cross the seas to the United States and to the Colonies, in search of higher wages than they can earn at home. Wiltshire is remarkable among the counties of England for its decreasing population; there being only two others (Cambridge and Rutland) in which there was any noticeable decrease in 1861 as compared with 1851. The decrease in Wiltshire was at the rate of about twenty in the thousand, or 2 per cent. in the ten years.*

The diminution in North Wiltshire was, however, much greater than in the South division of the county. In the former, between 1851 and 1861, it was at the rate of about thirty-five to the thousand, or $3\frac{1}{2}$ per cent. In South Wilts, indeed, the numbers shew a slight increase (315), but this is more than covered by the increase in the population

^{*} From 254,221 in 1851, to 249,311 in 1861. In Cambridge and Rutland, the diminution was at the rate of about 5 per cent. North Devon and South Lincoln are examples of decreasing population; but taking the whole of these counties there was a decided increase. Huntingdon, Oxford, and Suffolk were almost exactly stationary.

of the two boroughs of Salisbury and Wilton. Separately considered, South Wilts must be placed among stationary, rather than decreasing populations. When it is remembered that the rate of increase for all England, in the years 1851-61, was not less than 10 per cent., or one hundred in the thousand, what is to be understood by a population being stationary or diminishing will be at once seen.

In the population tables for 1861, there are footnotes referring to 34 Wiltshire Parishes and Districts, in which reasons for the decrease of population are assigned. In one-third (11) of these, "emigration" is the assigned cause; in another third "migration" to other places, some within, but mostly to large towns beyond, the county; amongst which Southampton is twice named, and the mining districts once. In two instances the entry of young men into the army is the cause given. In five places a more remote cause is mentioned; viz., the use of machinery in the place of handlooms in the towns of Westbury, Bradford, Trowbridge (Hilperton), in Bromham, and apparently Melksham.* In one place, Figheldean, the use of agricultural machinery, in Market Lavington the removal of a foundry, and in Stapleford the discontinuance of road traffic consequent on the facilities of railway communication, are the causes assigned. In three places, Cherhill, Urchfont, and Maiden Bradley, the diminution is ascribed to the removal

Causes of Decrease.

Emigration.

Migration.

Use of Machinery.

^{*} All these manufacturing towns show a decreasing population. The only Towns in Wiltshire in which the population in 1861 was not a diminishing one, were Salisbury and Wilton in the Southern Division, and Devizes, Chippenham and Swindon, in the Northern. In all, however, excepting Swindon, the increase was trifling. There was a trifling increase in Wootton Bassett and Pewsey, but these are little more than villages.

of dilapidated houses and cottages, or to insufficient cottage accommodation. It is almost certain that in nearly all these last-named cases emigration or migration must have been the result, and that, during the ten years 1851-61, there was a very considerable exodus of the labouring population. As it would, as a rule, be the more healthy and energetic men who would leave their homes, there would result an increase in the relative proportion of the bodily and mentally weak; and the effect could hardly be other than that of filling the Union houses, and indirectly augmenting the proportion, perhaps even the numbers, of the insane.

Large ratio of Pauperism in Wiltshire and

Dr. Bacon, of the Cambridge Asylum, has recently pointed out "the close relationship of poverty other Agricul- to the rate of insanity;" and states that in those tural counties. counties in which there are the most insane, pauperism is also greatest. Here again Wiltshire maintains a bad eminence, having a larger proportion of pauperism than any other county; the ratio being as high as one in every twelve of the population. According to the last report of the Poor Law Board,* the following was the relative amount of pauperism in six agricultural counties, chiefly in the South-West of England, on January 1st, 1868:--

Wilts	• •	• •	1	in	12
Dorset	• •	• •	1	in	13
Oxford	• •	• •	1	in	14
Gloucester	• •	• •	1	in	15
Berks	• •	• •	1	in	16
Hereford	• •	• •	1	in	16.

in Manufacturing counties.

Smaller ratio But in the northern and manufacturing counties the

^{*} Twentieth Annual Report, 1868. p. 282-8.

ratio of pauperism was little more than one-half of the above, viz.:-

Durham	• •	1	in	23
Stafford	• •	1	in	23
Lancaster	• •	1	in	25
York, N.R	m	1	in	25
York, W.R.	• •	1	in	26
Chester	• •	1	in	27
Derby	• •	1	in	33.

It would result from the whole of these comparisons, that the position of the farm labourer by no means exempts him from that liability to insanity, which is sometimes regarded as the especial penalty of a more ambitious career. We may, indeed, almost conclude, with an able and original investigator, that, on a large scale, "insanity is an upshot of mental inactivity;" and that our "uneducated cloddish populations" are its chief breeders.*

It is no libel on the North Wiltshire peasantry to class them to a great extent under this head. characteristics John Aubrey, himself a Wiltshire man, long since observed that "In North Wiltshire (a dirty clayey country) the indigenæ speake drawlinge, they are phlegmatique, skins pale and livid, slow and dull, heavy of spirit; hereabout there is but little tillage or hard labour; they only milk the cowes and make cheese. These circumstances make them melancholy, contemplative, and malicious; by consequence whereof come more lawsuits out of North Wilts, at least double to the southern parts. And by the same reason they are generally more apt to be fanatiques. In all changes of religion they are more zealous than other. The rich wet soil makes them hypo-

Liability to Insanity.

Aubrey's populations.

^{*} Dr. B. W. Richardson, Journal of Mental Science. Oct. 1869. p. 632.

chondriacal; their persons are generally plump and feggy; gallipot eies, and some black; but they are generally handsome enough. On the Downes, viz., the South part, where 'tis all upon tillage and where the shepherds labour hard, their flesh is hard, their bodies strong. Being weary after hard labour, they have not leisure to read and contemplate, but goe to bed to their rest, to rise betime the next morning."*

Are any of the Pauperism and of accumulation of Lunatics preventible?

Exception may be taken to some of these statelocal causes of ments of the old Wiltshire antiquary, and circumstances are certainly much changed since his time, but no doubt they contain a considerable amount of And hence, as many of the local causes of truth. insanity are but little preventible, there is the more reason to battle with those which are in any degree to be obviated. A well-known poet says,-

> Ill fares the land, to hastening ills a prey, Where wealth accumulates, and men decay.

The statistics of the accumulation of wealth may be beyond our appreciation, and they may present

^{*} Aubrey, Natural History of Wiltshire, pp. 11, 12. Some phrases are transposed, and a few omitted. "In Malmesbury hundred" (the wet, clayey parts), Aubrey says, "there have ever been reputed witches." In the middle ages and later, the effects of insanity were often confounded with the supposed crime of witchcraft. Aubrey apologizes for his "account of the severall humours of his own county as too sarcasticall," and wishes it for a time to "lye concealed as a sacred arcanum." His quaint jottings are contributions to a rude sort of treatise, De Aere, Aquis et Locis! He asserts that according to the severall sorts of soil the natives of the different parts of England, and all the world over, "are respectively witty or dull, good or bad." He tells us that "in the rich vales they sing clearer than on the hills, where they labour hard and breathe a sharp ayre." "The difference," he says, "is manifest between the vale of North Wilts and the South." In the former, and "in Somersetshire, they sing well in the Churches;"

nothing disproportionate or excessive; but if the emigration of the best and boldest of the peasantry of any given district be a cause of pauperism, and, indirectly, of an accumulation of cases of insanity, it becomes an important economic question how far such tendency to emigration may be diminished. The Wise King points out that to withhold more than is right and fitting tends to poverty. So it may perhaps be now. It at least occurs whether the low wages, lower probably in Wiltshire and Dorsetshire than in any other county,* might not be advantageously increased with the possible effect of reducing the poor-rates, and so obviating some of those evils, of which Wiltshire seems to have a large share.

In the foregoing observations reference is made

Ratio of Private Patients.

and "in North Wilts the milkmayds sing as shrill and clear as any swallow sitting on a berne"-(quoting Chaucer). Part of the difference which he traces between the people of the North and South parts of Wiltshire, he attributed to the food, and not all to the air and soil. Here we see the influence of a crude humoural pathology, now deservedly exploded. In North Wilts, he says, they "feed chiefly on milke meates, which cooles their braines too much, and hurts their inventions." Again, Aubrey tells us, "it is a woodsere country, abounding much with sowre and austere plants, as sorrel, &c., which makes their humours sowre and fixes their spirits." It must be observed that at the present day the peasantry of North Wilts get no "milk meats," unless a very little salt butter, and now and then a bit of cheese. Their staple and very unvaried diet is wheat bread and potatoes, perhaps a little bacon on Sundays. It is much the same throughout the county.

* The average wages of the agricultural labourer in Wiltshire is 9s. per week; shepherds, 10s.; and carters, 11s.: there are a few extras in harvest time, &c. The condition of the Wiltshire labourer and that of the "Dorsetshire hind" are nearly the same. Both, there can be little doubt, are "under-fed." See the interesting paper in "Good Words" for February, 1870, p. 94,—"Our Working People, and How they Live."

only to the Pauper Insanity of Wiltshire.

number of private patients cannot be ascertained, except as regards those detained in Asylums, and not accurately even as to these for individual coun-If the ratio of private patients in Asylums be the same in Wiltshire as in the rest of England, the number requiring to be added would be about But this number is far short of the reality; taking, as it does, no account of those boarded out in private houses and under the care of friends. Insanity, however, without doubt sooner or later reduces many of its victims to pauperism; and its ratio among those who retain their places in the upper and middle classes is much less than might be anticipated. On the other hand, it is certain that the returns of pauper lunatics and idiots in workhouses and with their friends are considerably swollen by cases not properly classed as insane. It is the custom, in many Poor Law Unions, in making up these returns, to include in them all who have once been treated for mental disorder or have been confined in Asylums; notwithstanding that symptoms of insanity to longer exist, and that the individuals are known merely as paupers who were once insane and are receiving relief in consequence of age, infirmity, The extent to which the numbers are or disease. thus enhanced, though varying according to the judgment and fancy of the returning officers, can be by no means insignificant.

Erroneous Returns.

Liability to Insanity.

The question of the liability to insanity, it must be remembered, is not here treated of. It is a large subject to which neither time nor space can now be devoted. It may, however, be allowed to quote the following sentences written twenty-five years ago.

Tested by occurring cases, not by

"The numbers of existing cases of insanity in different communities (or districts) are no test of existing ones. the relative liability to the disorder. They would

only constitute such a test, provided the duration of the disorder before terminating in recovery or in death, were the same in the communities compared. It is the proportion of occurring cases to the existing population which really constitutes the test. 6 There may be ten times as many lunatics in civilized as in barbarous countries and times; not because the tendency to insanity is greater, but because the lunatics live ten times as many months or years. The tendency to insanity in a class is expressed by the proportion that become insane." "*

It is quite possible, notwithstanding the large amount of existing insanity in Wiltshire, that, on a fair comparison of the occurring cases, this county might compare favourably with others in which the accumulation of pauper insanity is less.

Any extreme liability to Insanity in Wiltshire not proved.

And so likewise the supposed increased liability to insanity in England at the present time, as compared with the earlier part of the century, may, to a great extent or even altogether, be imaginary, when the increase in the general population is considered. No doubt the numbers brought together in Asylums have very much increased. In the Wilts County Asylum, within fifteen years, the numbers have been raised from 289 in 1855, to 457 at the beginning of 1870.†

Increase of Insanity in England not proved.

These numbers are sometimes thought to imply Large number a fearful rapidity in the increase of insanity. on turning to the annual admissions, which roughly correspond with the occurring cases, it is seen that these are on the whole very uniform, and even show a slight decrease. For the entire fifteen years, the

in the County Asylum explained.

^{*} Thurnam, Statistics of Insanity, 1845, p. 171. Farr, Statistical Journal, 1841, iv., 20.

[†] Annual Reports. Table 3. The Asylum, constructed for 286 patients, was opened in 1851. It has since been three times enlarged.

admissions have averaged 115, but, during the last five years, have amounted only to 110 per annum. In 1869 they were 108. So long as the recoveries (or discharges) and deaths are less numerous than the admissions, the numbers in the Asylum must progressively increase. During four of the last five years the deaths have been below the average; which, whilst speaking well for the sanitary arrangements, fully explains the augmentation in the actual numbers under care.

Facilities for sending Patients abused.

Part, however, of the increase must be referred to the facilities afforded by recent legislation to the admission of patients, many of whom are sent labouring under slight and transient forms of mental disorder, such as in former days would never have been removed from their homes. Some are brought who ought to be cared for elsewhere, in Workhouses, or even in Prisons. Not a few superannuated and paralytic old people, when they become troublesome in the wards of the Workhouse, are at once removed to the Asylum. In other instances men are brought who should be regarded as offenders against the laws, and punished accord-It is an abuse of an Asylum to send to it a man who, maddened by drink, assaults his wife or child, or commits some other vagary or act of violence. It may not be easy in every case to discriminate the excitement of intoxication, acting on a violent temper and coarse nature from mania; but a day or two would generally suffice to decide the question. The journey to the Asylum and the warm bath on arrival often suffice to dispel the excitement; and, it is obvious, that in place of a residence in our comfortable wards, there are cases in which a month's discipline at the treadmill would in every respect be the more appropriate treatment.

REPORT

OF THE

CHAPLAIN.

To the Chairman and Visitors of the Wilts County Lunatic Asylum.

GENTLEMEN,

A long period of more than ordinary ill-health has prevented my personal attendance at the Asylum during the past year so much as I could have earnestly desired.

I do not, however, know of any new features connected with my office to which I have to invite your special attention.

I have to report the performance of the Chapel duties as usual—the Daily Service having been only occasionally omitted, through inclemency of the weather or illness of officiating Minister.

The Daily Morning Service, at an early hour, in all weathers and seasons, is certainly a trying one—particularly during the latter part of Autumn and the early Spring—and I find few but the most robust constitutions proof against it.

This must always account for an occasional omission of the Service; but whenever illness has been prolonged beyond a few days, as the Register of Attendance will shew, a substitute has been always provided.

I have the honour to be, Gentlemen, Your obedient Servant,

B. C. DOWDING, Chaplain.

REPORT

OF THE

COMMISSIONERS IN LUNACY.

"WILTS COUNTY ASYLUM, 6th July, 1869.

"We have this day, at our official visit, inspected all the Wards and Offices, and personally examined all the Patients who are resident, viz., 177 of the male, and 265 of the female sex. Besides these two men and two women are away on trial, making the total number on the books this day 446, being nine more than at the date of our last visit, in May, 1868. The admissions within that interval comprise 54 in the male, and 65 in the female division; 20 men and 29 women have been discharged; and 28 men and 29 women have died. three cases inquests were held, and all the particulars were duly reported to our Board. As to the other causes of death, it appears that disease of the lungs was fatal in 14 cases; seven patients died of general paralysis; nine from exhaustion; five from paralysis; six from brain disease; two from epilepsy; and the rest from ordinary causes. At the time of admission a large proportion of the patients are found to be in very feeble health, and there are at the present time in the Asylum numerous cases of paralysis and epilepsy. one patients of each sex are under medical treatment, and four males and three females were in bed to-day.

- "We have generally a good report to make of the personal condition of the patients of both sexes, who during our visit were free from excitement, and no one was secluded. As to the use of seclusion since the last visit, it appears from the books that 10 males and 19 females have been secluded, for the most part each on one occasion only. The instances amongst the men being 41, and in the women's wards 50. One man was restrained for about ten days for surgical reasons.
- "We have made all the usual statutory enquiries, and have nothing new to report relative to the occupations and recreations of the patients, or their attendance at Divine Service. There are daily prayers, and two services on Sunday, at which somewhat more than 200 patients of both sexes are present.
- "The Staff of Attendants is now 14 for the male, and 16 for the female wards, including the night attendants, and two of the men who work with the patients on the land, but not the two laundry women. The proportion of attendants here is certainly less than in most other County Asylums, and we are glad to hear that an additional male assistant will shortly be engaged. The wages are upon a low scale.
- "We have ascertained that the inmates of the "refractory" wards are now taken beyond their airing courts for exercise, as recommended at the last visit. They were more orderly than usual to-day, but we have still to recommend, as on former occasions, the introduction of more furniture and comforts into their day rooms.
- "It is still the practice to place three or four patients in the same bath, but new baths are to be gradually introduced,

affording means for a more rapid change of water, when we hope this objectionable custom will be discontinued.

"Some change or enlargement of the Washhouse is certainly wanted, no increase has been made in this department not-withstanding the additions to the number of inmates, and the men are only allowed one shirt a week. We recommend that the laundry should be better ventilated by the introduction of openings in the roof.

"All the wards and offices are as usual clean, and in the best order, and the Establishment is evidently in a most efficient state, and highly creditable to Dr. Thurnam's management.

"W. G. CAMPBELL, Commissioners in Lunacy."
